

Table 11 Caveats

Caveat types	What kinds of information does this type of caveat cover	What special handling requirements does this caveat impose
Sensitive compartmented information (codewords)	<p>A codeword indicates that the information is of sufficient sensitivity that it requires protection in addition to that offered by a security classification.</p> <p>Each codeword identifies a special need-to-know compartment. A compartment is a mechanism for restricting access to information by defined individuals who have been 'briefed' on the particular sensitivities of that information and any special rules that may apply.</p> <p>The codeword is chosen so that its ordinary meaning is unrelated to the subject of the information.</p> <p>Use of codewords is primarily within the national security community.</p>	<p>It may be necessary to take precautions beyond those indicated by the security classification to protect the information. These will be specified by the entity that owns the information, for instance those with a need to access the information will be given a special briefing first.</p>
Foreign government markings	<p>Foreign government markings are applied to material created by Australian agencies from foreign source information.</p>	<p>The PSPF policy: Security governance for international sharing requires that, where an international agreement or international arrangement is in place, entities must safeguard sensitive or security classified foreign entity information or assets in accordance with the provisions set out in the agreement or arrangement.</p> <p>Foreign government marking caveats require protection at least equivalent to that required by the foreign government providing the source material.</p>
Special handling instructions	<p>Special handling instructions indicate particular precautions for information handling.</p> <p>Use of special handling instructions is primarily within the national security community. Some special handling instructions are used more broadly across government, as follows:</p> <p>EXCLUSIVE FOR (named person) The EXCLUSIVE FOR caveat identifies material intended for access by a named recipient only.</p> <p>CABINET The CABINET caveat identifies any material that:</p> <ol style="list-style-type: none"> i. is prepared for the purpose of informing the Cabinet ii. reveals the decision and/or deliberations of the Cabinet iii. is prepared by departments to brief their ministers on matters proposed for Cabinet consideration iv. has been created for the purpose of informing a proposal to be considered by the Cabinet. 	<p>Access to EXCLUSIVE FOR material is limited to a named person, position title or designation.</p> <p>The Cabinet Handbook specifies handling requirements for Cabinet documents. This includes applying a security classification of at least PROTECTED to all Cabinet documents and associated records.</p>
Releasability caveats	<p>Releasability caveats limit access to information based on citizenship.</p> <p>There are three releasability caveats used across government:</p> <p>Australian Eyes Only (AUSTEO) The AUSTEO caveat indicates only Australian</p>	<p>Information marked AUSTEO is only passed to, or accessed by, Australian citizens.</p>

<p>citizens can assess the information. Additional citizenships do not preclude access.</p>	<p>While a person who has dual Australian citizenship may be given AUSTEO-marked information, in no circumstance may the Australian citizenship requirement be waived.^{Note ii}</p>
<p>Australian Government Access Only (AGAO) In limited circumstances, AGAO is used by the:</p> <ul style="list-style-type: none"> i. Australian Signals Directorate (ASD) ii. Australian Security Intelligence Organisation (ASIO) iii. Australian Secret Intelligence Service (ASIS) iv. Department of Defence v. Office of National Assessments (ONA). 	<p>ASD, ASIO, ASIS, the Department of Defence and ONA may pass information marked with the AGAO caveat to appropriately cleared representatives of Five Eyes foreign governments on exchange or long-term posting or attachment to the Australian Government. For other entities, AGAO material is handled as if it were marked AUSTEO.</p>
<p>Releaseable to (REL) The Releasable To (REL) caveat identifies information that has been released or is releasable to the indicated foreign countries only.</p>	<p>For example, REL AUS/CAN/GBR/NZL/USA means that the information may be passed to citizens of Australia, Canada, United Kingdom, New Zealand and the United States of America only.</p>
<p>Nationalities are identified using three letter country codes from International Standard ISO 3166-1:2013 Codes for the representation of names of countries and their subdivisions – Alpha 3 codes.</p>	<p>The caveat is an exclusive marking that disqualifies a third-party national seconded or embedded in a foreign government entity from accessing the information.</p>
